

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (currently amended) A system comprising:
a personal digital assistant (PDA) including a battery; and
a cellular phone including a battery and being adapted to be detachably coupled to the PDA so that upon coupling the cellular phone to the PDA the combined cellular phone and PDA forms a single body;
wherein
when the PDA and the cell phone are coupled, the cell phone and the PDA are capable of being used independently and simultaneously to perform their respective functions; and
when the PDA and the cell phone are decoupled, the PDA operates as a conventional PDA, and the cell phone operates as a conventional cell phone.
2. (canceled)
3. (previously presented) The system of claim 1, wherein the PDA comprises the functionality of conventional electronic organizers.
4. (previously presented) The system of claim 1, wherein the PDA comprises the functionality of commercially available Pocket PCs.
5. (cancelled)
6. (previously presented) The system of claim 1, wherein the PDA comprises a keyboard and a display, the cellular phone and the PDA being adapted so that when the cellular phone is coupled to the PDA, the PDA keyboard and display are used in placing or receiving telephone calls.

7. (previously presented) The system of claim 1, wherein the PDA comprises a keyboard and a display, and wherein the cellular phone and the PDA are adapted so that when the cellular phone is coupled to the PDA, the keyboard and the display of the PDA are used along with the wireless communication resources of the cellular phone to connect to and communicate with the internet.

8-19. (cancelled)

20. (previously presented) The system of claim 1, wherein the PDA battery is the default power source for the combined cellular phone and PDA.

21. (previously presented) The system of claim 20, wherein the PDA further comprises a switch that allows for the user to set the default power source as either the rechargeable battery in the PDA or the rechargeable battery in the cell phone.

22. (previously presented) The system of claim 1, wherein when the PDA and the cell phone are coupled, the cell phone battery can be recharged by the PDA battery.

23. (currently amended) A system comprising:
a personal digital assistant (PDA); and
a cellular phone adapted to be detachably coupled to the PDA so that upon coupling
the cellular phone to the PDA the combined cellular phone and PDA forms a single body;
wherein
when the PDA and the cell phone are coupled, the cell phone and the PDA are
capable of being used independently;
when the PDA and the cell phone are decoupled, the PDA operates as a conventional
PDA, and the cell phone operates as a conventional cell phone,

The system of claim 5, wherein the PDA has a cut-out portion configured so that
when the cellular phone is coupled to the PDA, the cellular phone substantially fills out the
cut-out portion of the PDA, and

wherein the PDA further comprises a sliding door that can conceal the cell phone, and that can also slide open to allow the access to the cell phone when it is coupled to the PDA.

24-25. (canceled)

26. (currently amended) A system comprising:
a processing device including a battery; and
a wireless communication device including a battery and being adapted to be detachably coupled to the processing device,
wherein when the processing device and the wireless communication device are coupled, the wireless communication device and the processing device are capable of being used independently and simultaneously to perform their respective functions, and
wherein when the wireless communication device and the processing device are decoupled, the processing device operates as a conventional processing device and the wireless communication device operates as a conventional wireless communication device.

27. (canceled)

28. (previously presented) The system of claim 26, wherein when the processing device and the wireless communication device are coupled, the wireless communication device and the processing device share resources.

29. (previously presented) The system of claim 26, wherein the processing device is usable to place and receive a telephone call via the wireless communication device.

30. (previously presented) The system of claim 29, wherein the processing device has a display that displays information related to the wireless communication device.

31. (previously presented) The system of claim 30, wherein the information comprises information normally provided on a mobile phone display.

32. (previously presented) The system of claim 31, wherein the information comprises a remaining battery charge of the wireless communication device and a reception strength of the wireless communication device.

33. (previously presented) The system of claim 26,
wherein the processing device has at least one of a keyboard, a display, a microphone and a speaker;
wherein the wireless communication device has resources for transmitting and receiving of a signal; and
wherein when the wireless communication device is coupled to the processing device, the at least one of a keyboard, a display, a microphone and a speaker of the processing device is usable to place and receive a telephone call via the resources of the wireless communication device.

34. (previously presented) The system of claim 33, wherein the wireless communication device has at least one of a keyboard, a display, a microphone and a speaker which are useable to place and receive a telephone call.

35. (previously presented) The system of claim 26,
wherein the processing device has a keyboard, a display, a microphone and a speaker;
wherein the wireless communication device has resources for transmitting and receiving of a signal; and
wherein when the wireless communication device is coupled to the processing device, the keyboard, display, microphone and speaker of the processing device are usable to place and receive a telephone call via the resources of the wireless communication device.

36. (previously presented) The system of claim 35, wherein the wireless communication device has a keyboard, a display, a microphone and a speaker which are useable to place and receive a telephone call.

37. (previously presented) The system of claim 26,

wherein the processing device includes a personal digital assistant that has a cavity and an opening,

wherein the wireless communication device has a keyboard and is configured to be inserted into the cavity of the personal digital assistant, and

wherein when the wireless communication device is inserted into the cavity of the personal digital assistant, a user can access the keyboard of the wireless communication device through the opening of the personal digital assistant.

38. (previously presented) The system of claim 37, wherein the personal digital assistant has a keyboard and a display.

39. (previously presented) The system of claim 37, wherein the personal digital assistant has a cover for the opening, and wherein the user can open the cover to access the keyboard of the wireless communication device through the opening of the personal digital assistant.

40. (previously presented) The system of claim 26,
wherein the processing device has a battery,
wherein the wireless communication device has a battery, and
wherein when the processing device and the wireless communication device are coupled, both the wireless communication device and the processing device are powered by only one of the batteries of the processing device and the wireless communication device.

41. (previously presented) The system of claim 40, wherein the only one of the batteries is the battery of the processing device.

42. (previously presented) The system of claim 41, wherein the battery of the processing device is the default power source for the wireless communication device and the processing device.

43. (previously presented) The system of claim 41, further comprising a switch that allows for a user to set the default power source as either the battery of the processing device or the battery of the wireless communication device.

44. (previously presented) The system of claim 40, wherein the only one of the batteries is the battery of the wireless communication device.

45. (previously presented) The system of claim 26,
wherein when the processing device and the wireless communication device are coupled, the processing device functions as a host and the wireless communication device functions as a peripheral.

46. (previously presented) The system of claim 26,
wherein when the processing device and the wireless communication device are coupled, the wireless communication device functions as a host and the processing device functions as a peripheral.

47. (previously presented) The system of claim 26,
wherein the processing device includes a personal digital assistant that has a keyboard and a display, the personal digital assistant having a cuboid configuration and a cavity,
wherein the wireless communication device includes a cell phone that has a keyboard and a display and is configured such that the cell phone is insertable into the cavity of the personal digital assistant, and
wherein when the cell phone is inserted into the cavity of the personal digital assistant, the combination of the personal digital assistant and cell phone has the same cuboid configuration as the personal digital assistant does.

48. (currently amended) A system comprising:
a processing device including a battery; and
a wireless communication device including a battery and being adapted to be detachably coupled to the processing device,

wherein when the wireless communication device and the processing device are decoupled, the processing device operates as a conventional processing device and the wireless communication device operates as a conventional wireless communication device, and

wherein when the processing device and the wireless communication device are coupled, the wireless communication device and the processing device are capable of being used independently and simultaneously to perform respectively a function of the conventional processing device and a function of the conventional wireless communication device.

49. (canceled)

50. (currently amended) A system comprising:

a processing device; and

a wireless communication device adapted to be detachably coupled to the processing device.

wherein when the processing device and the wireless communication device are coupled, the wireless communication device and the processing device share resources. The system of claim 49, wherein the processing device is usable to place and receive a telephone call via the wireless communication device.

51. (previously presented) The system of claim 50, wherein the processing device has a display that displays information related to the wireless communication device.

52. (currently amended) A system comprising:

a processing device; and

a wireless communication device adapted to be detachably coupled to the processing device.

wherein when the processing device and the wireless communication device are coupled, the wireless communication device and the processing device share resources, wherein the processing device is usable to place and receive a telephone call via the wireless communication device, wherein the processing device has a display that displays information

related to the wireless communication device, and ~~The system of claim 51,~~ wherein the information comprises information normally provided on a mobile phone display.

53. (previously presented) The system of claim 52, wherein the information comprises a remaining battery charge of the wireless communication device and a reception strength of the wireless communication device.

54. (currently amended) A system comprising:
a processing device; and
a wireless communication device adapted to be detachably coupled to the processing device;
wherein when the processing device and the wireless communication device are coupled, the wireless communication device and the processing device share resources; ~~The system of claim 49,~~

wherein the processing device has at least one of a keyboard, a display, a microphone and a speaker;

wherein the wireless communication device has resources for transmitting and receiving of a signal; and

wherein when the wireless communication device is coupled to the processing device, the at least one of a keyboard, a display, a microphone and a speaker of the processing device is usable to place and receive a telephone call via the resources of the wireless communication device.

55. (previously presented) The system of claim 54, wherein the wireless communication device has at least one of a keyboard, a display, a microphone and a speaker which are useable to place and receive a telephone call.

56. (currently amended) A system comprising:
a processing device; and
a wireless communication device adapted to be detachably coupled to the processing device;

wherein when the processing device and the wireless communication device are coupled, the wireless communication device and the processing device share resources; The system of claim 49;

wherein the processing device has a keyboard, a display, a microphone and a speaker;

wherein the wireless communication device has resources for transmitting and receiving of a signal; and

wherein when the wireless communication device is coupled to the processing device, the keyboard, display, microphone and speaker of the processing device are usable to place and receive a telephone call via the resources of the wireless communication device.

57. (previously presented) The system of claim 56, wherein the wireless communication device has a keyboard, a display, a microphone and a speaker which are useable to place and receive a telephone call.

58-59. (canceled)

60. (currently amended) A system comprising:

a processing device; and

a wireless communication device adapted to be detachably coupled to the processing device.

wherein when the processing device and the wireless communication device are coupled, the wireless communication device and the processing device share resources.

wherein the processing device includes a personal digital assistant that has a cavity and an opening.

wherein the wireless communication device has a keyboard and is configured to be inserted into the cavity of the personal digital assistant.

wherein when the wireless communication device is inserted into the cavity of the personal digital assistant, a user can access the keyboard of the wireless communication device through the opening of the personal digital assistant, and

The system of claim 58, wherein the personal digital assistant has a cover for the opening, and wherein the user can open the cover to access the keyboard of the wireless communication device through the opening of the personal digital assistant.
